衷心感谢

A liberal arts and sciences education relies not on a formula for choosing and combining courses but on a culture of pedagogy that is immersive and dynamic, in which teachers and students work closely together to approach open questions, articulate hypotheses, test out ideas and challenge one another. This approach to education builds critical and problem-solving skills simultaneously, conferring a broad base of knowledge and fostering the ability to question that knowledge and apply it flexibly.

A liberal arts and sciences education provides students with knowledge and skills that shape their lives, enhance their roles as citizens and increase their competitiveness for jobs. It develops their creativity and leadership, and is deeply cross-cultural in its orientation, giving all participants the ongoing experience of learning to see from multiple points of view and to work together across cultural boundaries — a crucial skill for the future.
